

## Woolly

Woolly is woven from recycled wool. It can be leftover materials from clothing manufacturing or other wool products that have been recycled. Each kilogram of pure new wool produces 9 kg of carbon dioxide. Processing 1 kilogram of recycled wool generates only 0.5 kg of carbon dioxide. Positive environmental impact thanks to less water consumption, energy and lower CO2 impact. Woolly is certified according to Global Recycled Standard (GRS).

The wool is not dyed with water. By combining yarn from recycled clothing in different colors the textiles get their shades
